└─ Tape & Reel Package Required  
└─ Resistance Value  
└─ Type

Resistance value, in ohm, is expressed by a series of five characters, four of which represent significant digits. R or K is a dual-purpose letter that designates both the value range (R for ohmic; K for kilo-ohm) and the location of the decimal point.

**PRECAUTION IN USING FACE-BONDED CHIP RESISTORS**

- Storage**  
Storage conditions or environment may adversely affect solderability of the exterior terminals. Do not store in high temperature and humidity. The recommended storage environment is lower than 40°C, has less than 70% RH humidity and is free from harmful gases such as sulphur and chlorine.
- Caution in Soldering**
  - Hand Soldering**  
Hand soldering is applicable as shown at right.  
Recommended
    - Temp. of iron tip: 240°C to 270°C
    - Power of iron: 20W or less
    - Diameter of tip: dia. 3 mm max.
  - Solder Reflow in Furnace**  
Recommended
    - Peak temperature: 250+0/-5°C
    - Holding time: 10 sec. max.
    - To cool gradually at room temperature
  - Dipping in Solder (Wave or Still)**  
Recommended
    - Temp. of solder: 260°C max
    - Length of dipping: 10 seconds
    - To cool gradually at room temperature
  - Other**  
Corrosion-free flux, such as rosin, is recommended. Do not apply pressure to the molded housing immediately after soldering.
- Cleaning**  
Use volatile cleaner such as methylalcohol or propyl alcohol.
- Circuit Board Design**  
The dimensions of solder land must be determined in conformity with the size of resistors and with the soldering method. They are also subject to the mounting machine and the material of the substrate. See example below.

Type	A	B	C	D
MP	1.6 to 2.0	0.5 to 1.5	2.2 to 2.6	1.8
MQ				2.5

Dimensions in mm

When parts are mounted on a board in high density, solder can possibly attach to the resistors in an excessive amount to affect performance or reliability of the resistors. To prevent this effect, the use of solder resist is recommended to isolate solder lands.
